

Fiber-fast Wireless Infrastructure for CCTV Surveillance

WIRELESS CCTV SURVEILLANCE INFRASTRUCTURE

- SMART AND SAFE CITIES
- FIBER-FAST WIRELESS BROADBAND
- TRIPLE-PLAY WIRELESS SURVEILLANCE NETWORK
- INTELLIGENT CCTV SURVEILLANCE

Connecting hundreds of IP CCTV surveillance cameras using wireless technology require detail planning, design and execution process. Our fiber-fast wireless network solutions are designed to bring your security solutions into the modern era.

WHY A RELIABLE WIRELESS INFRASTRUCTURE NETWORK IS CRUCIAL?

HARD FACTS

IP based CCTV systems offer significant advantages over traditional analogue systems such as better remote access, greater integration with other systems, improved image quality as well as scalability. In order to take full advantage of the benefits of IP CCTV system, a well-designed wireless infrastructure is critical.

- **HIGH DEFINITION PTZ CAMERAS** – provides wider coverage and superior zoom. This requires high capacity wireless network to operate.
- **WIDE SPREAD CAMERAS LOCATION** – connection of multiple surveillance sites, challenging terrain and distances is part of the crucial network planning.
- **SCALABILITY** – wireless surveillance network capacity need to be designed to cater for future growth and expansion.
- **FREQUENCY AND SPECTRUM** – wireless network requires proper frequency planning to ensure interference mitigation for a stable image quality for surveillance purposes.

- **REMOTE MANAGEMENT** – monitoring and managing CCTV cameras at various locations require a system that complies to both cloud and on-premise network management system.

Aglotel offers high-capacity wireless infrastructure designed specifically for CCTV surveillance market. We have more than 20 years' of experience in providing the best wireless infrastructure design and implementation. Call us for more info.

Aglotel Wireless Solutions Sdn Bhd.

34, Jalan BP 6/13, Bandar Bukit Puchong, 47100 Puchong, Selangor, Malaysia.
