

Fiber-fast Wireless Infrastructure for CCTV Surveillance

BUILDING ROBUST WIRELESS CCTV SURVEILLANCE FOR ENHANCED SECURITY

SMART AND SAFE CITIES USE FIBER-FAST WIRELESS BROADBAND, TRIPLE-PLAY WIRELESS SURVEILLANCE, AND NETWORK INTELLIGENT CCTV FOR ENHANCED SECURITY AND EFFICIENCY.

Connecting hundreds of IP CCTV surveillance cameras using wireless technology require detail planning, design and execution process. Our fiber-fast wireless network solutions are designed to bring your security solutions into the modern era.

WHY A RELIABLE WIRELESS INFRASTRUCTURE NETWORK IS CRITICAL?

HARD FACTS

IP based CCTV systems offer significant advantages over traditional analogue systems including better remote access, greater integration with other systems, improved image quality, and scalability. To fully leverage these benefits, a well-designed wireless infrastructure is essential.

- **HIGH DEFINITION PTZ CAMERAS** – Provides wider coverage and superior zoom. This requires high capacity wireless network to operate.
- **WIDE SPREAD CAMERAS LOCATION** – Connecting multiple surveillance sites, challenging terrain and distances is a crucial aspect of network planning.
- **SCALABILITY** – Wireless surveillance network capacity need to be designed to accomodate future growth and expansion.
- **FREQUENCY AND SPECTRUM** – Wireless networks require proper frequency planning to mitigate interference and ensure stable image quality for surveillance.
- **REMOTE MANAGEMENT** – Monitoring and managing CCTV cameras at various locations require a system to compliant with both cloud and on-premise network management system.

Aglotel offers high-capacity wireless infrastructure tailored for the CCTV surveillance market. With over 30 years of experience, we specialize in providing top-quality wireless infrastructure design and seamless implementation. Our solutions ensure reliable, high-performance connectivity for surveillance systems.
